

Please allow Satellite radio to continue to provide traffic and weather programming. The Satellite radio stations, both through XM and Sirius provide an important and valuable alternative to the entire spectrum of commercial radio. I am willing to pay for the service and the offering they provide should not be limited by politics. They are neither offensive nor monopolistic. I know where the traffic and radio information is being broadcast on AM and FM Bands. I'll choose them if I wish, but please do not eliminate competition in a fair and open market.
